If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

**METHOD OF MAKING HIGH TEMPERATURE RESISTANT MODELS OR TOOLS**

***Detailed Action***

1. Applicant's request for reconsideration filed on July 17, 2009, was received.  
Claim 14 was amended. Claims 15-17, 20, 21, and 27 were cancelled.

***Examiner's Amendment***

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In the claims:

Cancel claims 22-26 and 28.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Holthus on December 7, 2009.

***Reasons for Allowance***

3. Claims 14, 18, and 19 are found allowable because the prior art does not teach a method of producing a tool by building a stack of substrates adhered with several intermediate layers of adhesive paste, shaping the stack in a first machining step, coating the stack's outer surface with a continuous machine-dispensed layer of curable paste having the same composition as the adhesive paste and including a first amine

Art Unit: 1791

curing agent and a second latent curing agent, curing the pastes at room temperature, shaping the stack to its final structure in a computer-controlled second machining step, and post-curing the pastes at a temperature of at least 130°C. As described in the Office action issued on October 28, 2008, Matsumoto et al. (EP 0 662 380) teach a similar method of making a tool by stacking model blocks together with layers of epoxy adhesive paste, machining the stack to a final structure, coating the machined stack with an epoxy paste, and finally curing the stack (col. 6, LL. 18-23, LL. 27-33, LL. 50-57; col. 7, LL. 4-14; col. 8, LL. 22-35; col. 9, LL. 3-15), where it would have been obvious to the skilled artisan to choose the same epoxy paste for both the adhesive and coating layers. However, Matsumoto et al. do not suggest curing the stack in a two-step process, first at room temperature and then at 130°C or more, nor machining the stack in two steps separated by the first room-temperature curing step. Further, the additional prior art does not teach an advantage to making models or tools by way of such two-part machining and two-part curing operations, such that one of ordinary skill in the art would not have been motivated to modify the method of Matsumoto et al. to arrive at the claimed invention.
